Knowledge Base Entry — Digital Communication & UX Support

Web Content Specialist — Consultlocus A/S

Role Overview

Short-term engagement supporting digital communication, website usability, and content structure for a small consultancy organization. The role focused on improving clarity, navigation, and visual coherence of existing web assets, while aligning changes with business and communication goals through direct stakeholder interaction.

Core Responsibilities

- Collaborated directly with stakeholders to clarify communication goals and identify gaps between intended messaging and actual user experience.
- Conducted meetings with management to:
    - Present improvement proposals
    - Gather feedback
    - Iterate on solutions based on business priorities
- Improved website usability and structure through:
    - UX-focused layout adjustments
    - Streamlining of content and navigation
    - Visual and graphic refinements
- Performed light front-end and CMS work, including:
    - HTML-based adjustments
    - WordPress content and layout updates
    - Bug fixes and media integration
- Assisted with marketing-related tasks where technical and communicative overlap was required.

Job-Focused Impact & Transferable Value

- Strengthened the ability to **translate abstract communication goals into concrete technical and design changes**.
- Developed practical experience balancing:
    - Technical feasibility
    - Visual clarity
    - Stakeholder expectations
- Reinforced user-centered thinking, focusing on how information structure and interface decisions affect comprehension and engagement.

- Demonstrated adaptability by contributing value outside a core biomedical/ML domain during a transitional period.

Reusable Professional Insight

- “This role reinforced how small, well-targeted UX and content changes can significantly improve clarity and perceived quality, even without large technical overhauls.”
