Skills & Capabilities Summary

Data Science, Analytics & Statistics

- Data analysis of complex, real-world datasets
- Statistical modeling and exploratory data analysis
- Multivariate analysis (e.g. PCA)
- Experimental design and validation
- Data quality, provenance, and uncertainty assessment
- Reproducibility-focused analytical workflows
- Data visualization for analysis and communication

Programming & Analytical Computing

- Python
- MATLAB
- SQL
- Java (foundational / academic)
- C# / .NET / Blazor
- Android development (Android Studio, solo project)
- Object-oriented programming (OOP)
- Git / GitHub
- JSON, YAML, parsing
- Anaconda
- JetBrains Rider
- Visual Studio Code

Machine Learning & Modeling

- Classical machine learning (regression, ensemble methods, random forest)
- Deep learning (CNN, RNN, LSTM)
- Computer vision (e.g. segmentation, Mask R-CNN)
- Generative models (CycleGAN – exposure)
- Reinforcement learning (introductory)
- Large language models (introductory / exploratory)
- Model evaluation, limitations, and interpretability

Signal Processing & Instrument-Generated Data

- Signal processing
- Image processing and image analysis
- Medical image segmentation and coregistration
- Frequency-domain and spectral data reasoning
- Biomedical and auditory signal contexts

Data Engineering, Pipelines & APIs

- Data pipelines (ingestion → processing → validation)
- Schema-based data modeling (e.g. JSON schemas / IDS-style structures)
- FAIR data principles
- Metadata handling
- Parquet (hands-on experience)
- Elasticsearch (applied use)
- REST APIs and minimal APIs
- CI/CD (applied, platform-focused)
- Application deployment (integrated with existing platforms)

BI, Visualization & Monitoring (Transferable)

- Power BI
- Tableau (limited exposure; transferable)
- Dashboards
- Grafana (monitoring and alerts)

UX, Documentation & Product Thinking

- User experience (UX) and user interface (UI) design
- User stories and requirements translation
- Design thinking
- Human–computer interaction
- Technical documentation (Markdown, user guides, SOP-style documentation)
- Figma

- Storylane
- WordPress

Domain Knowledge

- Healthcare and life sciences
- Medical devices
- Clinical research workflows
- Laboratory and instrument data
- Regulatory affairs and GMP fundamentals
- Biomedical engineering
- Audiology

Ways of Working & Professional Skills

- Cross-functional collaboration
- Bridging technical, analytical, and domain perspectives
- Clear written and verbal communication
- Teamwork and informal leadership
- Agile / Scrum
- Backlog structuring and prioritization
- Change awareness and adaptation
- Knowledge sharing and onboarding

Learning & Adaptation Style

- Quickly productive in new tools by mapping concepts to known systems
- Comfortable ramping up independently using documentation and examples
- Strong at identifying conceptual differences between languages, tools, and frameworks
- Prefers understanding underlying models and assumptions before implementation

---

Notes for the Job Search GPT (Internal Logic)

- Treat **Python, MATLAB, SQL, data analysis, ML, pipelines, APIs** as confirmed skills
- Treat **Tableau and Jupyter Notebook** as adjacent, transferable skills
- Ask clarifying questions only when a role depends on deep, tool-specific expertise outside this set

- Prefer concrete descriptions of work over abstract labels or titles
